

BODRUDDOZA ARAF

Full-Stack Developer

Dhaka, Bangladesh +880 1904-519247 [✦ Email](#) [✦ GitHub](#) [✦ LinkedIn](#)

PROFESSIONAL SUMMARY

Full-stack developer who took an e-commerce platform from empty repository to a live store taking nationwide orders in two months, as the only engineer on it. Strongest in TypeScript, Next.js, React and the data layer, with production LLM work and research depth in deep learning for computer vision. Graduating October 2026 and available full time.

EXPERIENCE

Full-Stack Developer (Contract), Jack The Jelli

June 2026 to August 2026

Leather goods brand, Dhaka [✦ jackthejelli.com](#)

- Shipped a complete e-commerce platform as the sole engineer in two months, covering storefront, cart, cash-on-delivery checkout, order tracking, customer accounts and an admin back-office in a single Next.js 16, TypeScript and MongoDB codebase.
- Designed order placement to stay correct under failure: idempotency keys block duplicate orders, guarded atomic decrements restore stock exactly once on cancellation, and snapshotted line items stop later product edits rewriting order history.
- Hardened a public, unauthenticated checkout with rate-limited server actions and server-side delivery pricing across all 64 districts, plus guest orders that attach to an account on email verification.
- Cut launch infrastructure cost to effectively zero by persuading the founders to defer the payment gateway, AI search and third-party APIs until after scale.

PROJECTS

EduBridge AI | AI Study-Abroad Advisor

Next.js 16, TypeScript, PostgreSQL, Gemini API

[✦ GitHub](#) [✦ Live demo](#)

- Built a university and scholarship matching platform for first-generation international students to a live client brief from Freelancer.com, pairing deterministic eligibility scoring with the Google Gemini API so every recommendation carries an explanation, strengths and a roadmap.
- Implemented Clerk authentication with webhook user sync, Zod-validated intake, a conversational AI advisor and a recommendations dashboard on Neon Postgres through Drizzle ORM.

PC-Builders | PC Configurator and Storefront

React 19, Node.js, Express, MongoDB, Redis

[✦ GitHub](#) [✦ Live demo](#)

- Built a full PC build configurator spanning CPU, motherboard, RAM, GPU and storage as one coherent specification, plus a budget-constrained selector that assembles a compatible component set to a price the customer picks.
- Implemented the backend with JWT auth, Redis caching, Cloudinary storage and bcrypt hashing, behind a deployed React 19 and Vite frontend using Zustand for state.

News Topic Classification | NLP Architecture Comparison

Python, TensorFlow/Keras, Gensim, scikit-learn

- Ran a controlled comparison, as sole implementer, of three preprocessing strategies, two word representations (TF-IDF, custom Skip-gram) and six architectures (DNN, SimpleRNN, GRU, LSTM, Bi-GRU, Bi-LSTM), reaching 91.9% accuracy and 0.919 macro F1.
- Recovered two dead baselines: diagnosed exploding-gradient collapse at chance accuracy (LSTM 25.0%, SimpleRNN 26.6%) and brought them to 91.4% and 87.3% with gradient clipping and targeted regularisation.
- Drove preprocessing from exploratory analysis, using bigram frequency to isolate HTML noise and POS tagging to justify lemmatisation over stemming, and removed 22,067 duplicate records.

RESEARCH

Deep Learning-Based Complete Image Prediction from Partial or Occluded Images

Defended 2026

Undergraduate thesis | Supervisor: Dr. Chowdhury Mofizur Rahman, BRAC University | PyTorch

- Co-developed a GAN-free, single-pass image completion framework (Dual-Manifold VQ-VAE, Latent Attention U-Net Mapper and Multi-Scale Detail Injection) reaching 27.60 dB PSNR and 0.861 SSIM at roughly 32 ms per 256x256 image.
- Owned mask generation, zero-shot evaluation on four unseen datasets, retraining of five baselines under matched conditions, and the ablations showing a 52.7% cut in mapper validation latent loss; placed 2nd of 6 on zero-shot average PSNR.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React, Next.js (App Router), TailwindCSS, shadcn/ui, Zustand, TanStack Query

Backend & Auth: Node.js, Express, Next.js Server Actions, REST APIs, Zod, JWT, Better Auth, Clerk

Databases: MongoDB (Mongoose), PostgreSQL (Neon, Drizzle, Prisma), Redis

Machine Learning: PyTorch, TensorFlow / Keras, scikit-learn, Gensim, NumPy, pandas

Tooling: Git, Vercel, Render, Cloudinary, Google Gemini API, Vercel AI SDK

Spoken: English (professional working proficiency), Bangla (native)

EXTRACURRICULAR

- Won the Rising Star Football Tournament twice with the Football Club of BRAC University, taking Best Striker in the first title and Best Midfielder in the second, and reached the semi-finals at TARC during the Residential Semester.

EDUCATION

BRAC University, Dhaka | B.Sc. in Computer Science

Expected October 2026
